

DIGITAL LITERACY & ONLINE PRESENCE

Name: Jahnavi Gaur

Reg No. : 25MIP10066

Course: Digital Literacy

Branch: Integrated M.tech CDS

Task 1: Digital Literacy Awareness Infographic

For this task, I designed a one-page infographic titled "Digital Literacy: A Survival Guide for Future Engineers." I wanted to create something that my friends and batchmates could quickly scan and understand. I broke the content into three main buckets:

- The Core Meaning: I explained that being digitally literate isn't just about knowing how to use a laptop, but about being smart and responsible with information.
- The Student Toolkit: I highlighted tools that are actually relevant to us as CDS students, like GitHub for our code and LinkedIn for our future careers.
- Safety First: I added a section on 2FA and HTTPS because, with so many scams going around, knowing how to stay secure is the most important part of literacy.

Reflection:

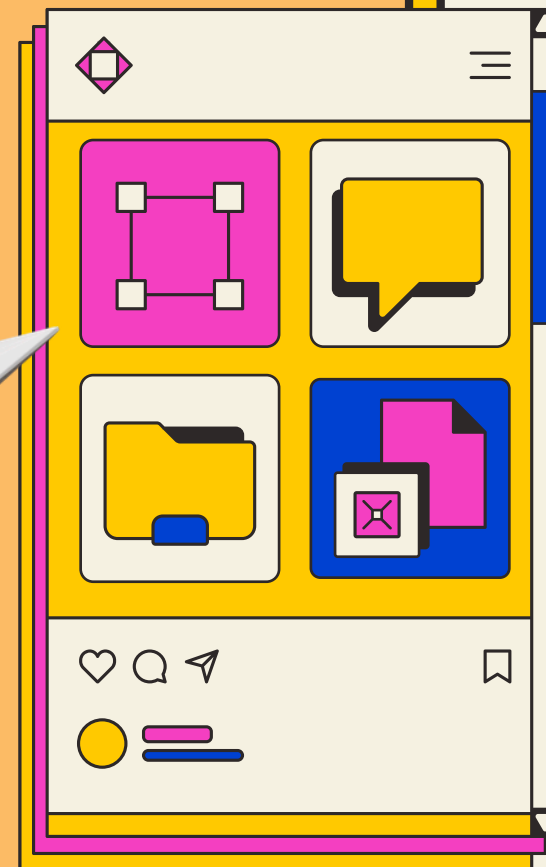

Working on Canva was actually quite fun. Picking the right icons—like the small lock for security or the GitHub logo—made the abstract concepts feel more "real." The hardest part was definitely the word count; I had so much to say but had to cut it down into short, punchy bullets so the poster didn't look messy. It taught me that sometimes, less is more when you're trying to get a message across.

Task 2: Professional Online Presence

In this task, I focused on building my professional identity beyond just social media. I set up three major profiles:

- LinkedIn: I updated my headline to show I'm a 1st-year CDS student at VIT Bhopal and added my core skills like Python.
- GitHub: This was my favorite part. I created a special "Profile README" which acts like a digital resume where I can showcase my projects and my coding journey.
- Stack Overflow: I set up my account and tagged topics I'm currently learning, like Data Structures and Algorithm Analysis.

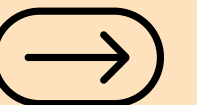

Task 3: Platform Skills & Community Practice

HackerRank Challenge: I took on the "Solve Me First" challenge using C++. It was a great way to test my basic logic and syntax. My code passed all the test cases on the first go, which gave me a good confidence boost. I've attached the screenshot with the green "Success" banner as proof.

Google Form Quiz: I created a "Digital Literacy Awareness Quiz" with 5 questions. I used a mix of multiple-choice and short-answer questions to keep it engaging. I also linked the form to a Google Sheet so that all responses are automatically organized into an Excel-style format for easy tracking.

Task 4: Mastering Professional Communication

1.

EMAIL ETIQUETTE

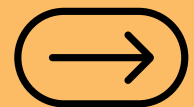

I drafted two very different emails. The first one was to a professor asking for an assignment extension—I made sure to stay respectful and give a genuine reason (debugging technical issues!).

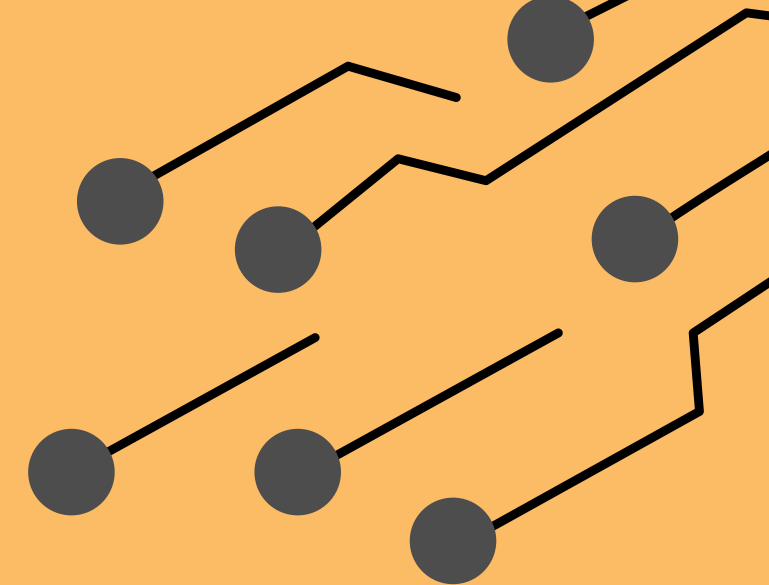

The second was an "Expression of Interest" for a summer internship, where I focused on how my CDS skills could help their company.

2.

SOCIAL MEDIA CHECKLIST:

I also put together a 10-point list of Do's and Don'ts. Writing this made me realize how often we overlook small things, like checking privacy settings or avoiding public Wi-Fi for sensitive tasks. It's all about being professional, even on informal platforms.

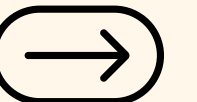

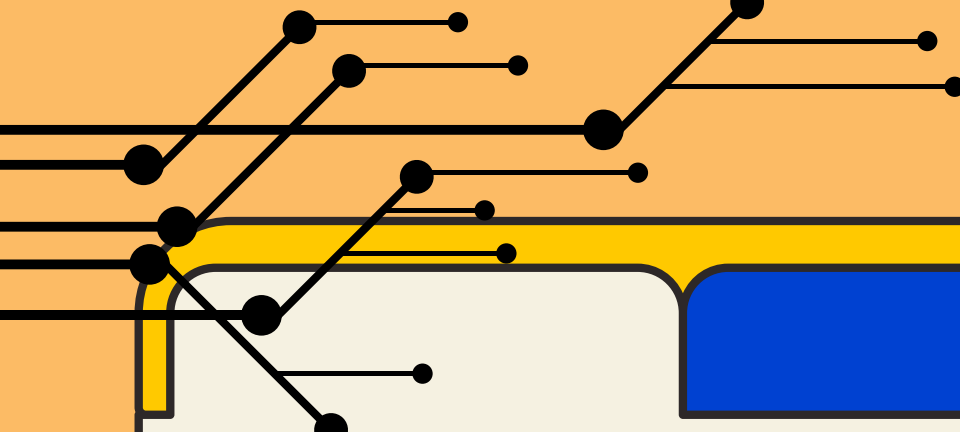

Task 5: Cybercrime Case Study (The "Scanner" Trap)

Case Study Overview:

I wrote a detailed case study about a common "UPI QR Code Scam." I used a fictional character named Aryan, a student who just wanted to sell his old Kindle but ended up losing ₹18,500 because he fell for a fake "Army Officer" persona.

The biggest lesson here is that a UPI PIN is only for sending money, never for receiving it. I also included a checklist for my batchmates, highlighting the 1930 helpline and the cybercrime.gov.in portal. This task really opened my eyes to how sophisticated scammers have become and why we need to be extra careful with our digital finances.

Conclusion: My Digital Literacy Journey

Project Summary: This project was more than just a series of tasks; it was a roadmap to building a professional and secure digital identity. From designing an infographic in Task 1 to analyzing complex UPI scams in Task 5, I have transitioned from being a passive internet user to an active, informed, and secure Digital Citizen.
